

TaylorSmart

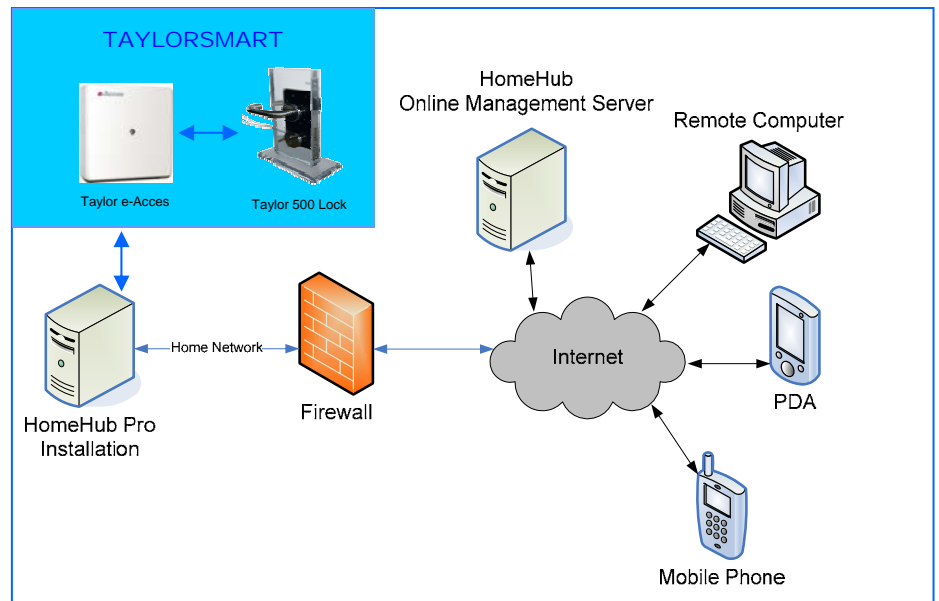

TaylorSmart Control and Monitoring Solutions

TaylorSmart runs on the HomeHub Pro platform, a multi-purpose, low cost platform that enables customised and complete Smarthome solutions. TaylorSmart options include remote control, security and monitoring for the home or business. Systems can be quickly installed and are compatible with a wide variety of existing protocols and equipment found in modern properties. TaylorSmart systems could be used to replace a traditional security system with the ability to provide additional features such as SMS/Email alerts on alarm together with remote video camera monitoring, door control and building management.

TaylorSmart can be accessed using a variety of different interface devices such as; a desktop PC, laptop, PDA, TV and touch-screen.

TaylorSmart is an innovative software solution running on a hardware platform that provides the ability to access, setup, control and monitor equipment remotely via the internet or mobile phone. Including securely monitoring live video images from cameras or allowing access for delivery drivers whilst away.

TaylorSmart can provide the support required to host the portal service which allows this remote connectivity and management.

- IP Based Video Camera Monitoring
- Lighting and Appliance Control
- Traditional security system augmentation or replacement
- Local or remote Door Access Control
- HVAC Control and Monitoring
- Remote Access to Many Ethernet Enabled Devices
- Advanced Events Management and Scheduling
- Alerts and Notifications via SMS and E-mail
- Accessed and Controlled via TV, Web browser, Mobile Phone and Touch-screen
- Caller ID and PBX functionality

Custom Development

TaylorSmart provides a development service which can add new custom interfaces to provide new services or integrate with more specialist devices as required by the installer. The TaylorSmart software provides a flexible framework which allows custom drivers to be implemented and deployed rapidly into any tailor-made solution. This can include the deployment of new services after the system has been installed by way of automatic software updates from our online servers.

Specifications are subject to change without any notice or obligation on the part of the manufacturer
